

Happy Friday!

This afternoon we are going to have Investigation inspired by the work we have done this week on Poll and Graph making. This morning let's start with the poll you took for homework.

Find your Polling for More Data sheet and use some of the strategies you discovered yesterday to make some predictions about your data. What if you **doubled** the number of people and they answered in the exact same way? What would the total number of each response be? What if you **tripled**?

Write an equation for each column. Be sure to label your answers too! Remember you can always use your "Things To Do" box to check your work.
