

Break Your Brittle

- in six easy-to-follow steps

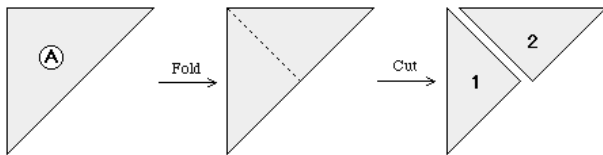

1. Fold the brittle so that a square is formed. Cut off the extra flap and discard.

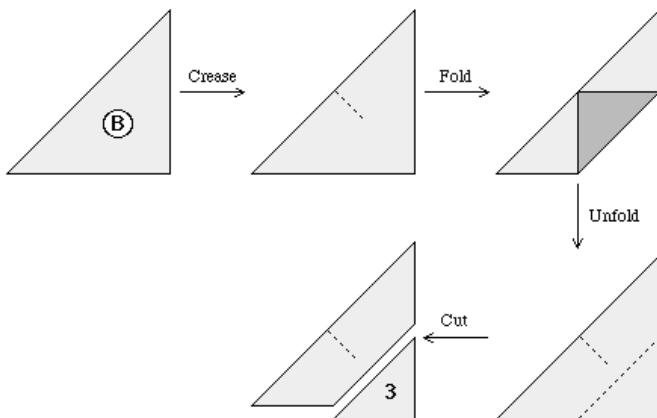

2. Break the square into two triangles

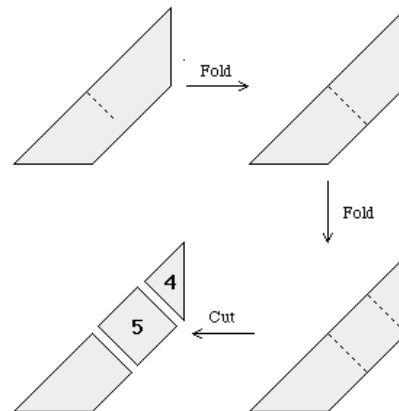

3. Take one triangle and fold it in half. Break the triangle along the fold into two smaller triangles.

4. Take the other triangle and crease it in the middle. Fold the corner of the triangle opposite the crease and break.

5. Fold the trapezoid in half and fold again. Break along both folds.

6. Fold the remaining small trapezoid and break it in two.

The Story of the Seven Beloved Brothers and the Broken Brittle

7 Kind brothers trick-or-treated on Brittle Blvd. At the first house, they received one square of brittle to share. Baby brother smashed the brittle on the bricks creating the *seven* pieces you see before you.

“Oh bother! My brothers,” bellowed biggest brother Bob, “how shall we share the broken brittle?”

Mike the middle brother came up with a plan. “If we figure out the fraction that each piece represents of the total brick, we can be sure to share fair!”

“Sure ‘nuff that way we all end up with **one whole** brick o’ brittle,” Bart piped up.

“If we put our pieces together, we can figure out what each piece is worth,” Bill explained.

Buster instructed, “By comparing the pieces we can tell what fraction of a brick each piece represents. At All Hallows end, we will each have one square.”

Here is a handy helper invented by Benjamin Franklin Brother.
