

Good Morning!

George has sent us some maps of nesting boxes. This is the aerial view, or bird's eye view, of the site. He needs to stake down each nest at the corners so that the polar bears can't pick them up.

Determine how many stakes each nest needs and where they are placed. Use the letters and numbers on the grid to label the corners.

This box has six corners so it needs six stakes. This stake is placed at C,2.
