

Good Morning!

Creature Feature Six: Centipede

Many folks think I have exactly one hundred feet, yet centipedes can actually have anywhere from under twenty to over 300 feet!

Each pair of legs is on its own segment and is a bit longer than the set in front of it. That way I can move swiftly without having my legs overlap.

Oh, and watch out for my forcipules. Forcipules are claws that are venomous. You know I'm a meat eater, right?

Here's a little centipede-inspired fun for Math Vitamin!

Some of my centipede friends like to stroll in style. They wear colored shoes to walk mile after mile.

Sally Centipede wears $\frac{1}{2}$ blue and one-half red.
Celia likes a quarter yellow and $\frac{3}{4}$ blue instead.

Don't forget Cesar! He's lacing up too.
One third red, $\frac{1}{3}$ yellow and $\frac{1}{3}$ blue.

Use the blocks and Math Vitamin sheets to show how the Centipede friends lace up!
