

Yesterday for Math Vitamin, you built a model of one of the raised beds that will be in our new garden on the upper Labyrinth playground. After constructing the **length**, **width** and **height** from blocks, you then found the **VOLUME** (how many cubic feet of soil it will hold) by counting all the blocks that fit inside. Today, you are the designer! Design a new raised bed with a new **length**, new **width** and new **height**. Build, record and calculate the new **VOLUME** of your unique raised bed. Have fun, gardeners!
