

Good Morning! Today is April 3, 2012.

Calling all inventors!!

Keeping Biomimicry in mind, it is time to invent a new machine!

Use the pattern blocks to invent something new!

In order to get your machine manufactured, you will need to pack your individual parts up into hexagonal boxes.

For example, we know that a triangle will take up $1/6$ of the box, or that a trapezoid will take up $1/2$ of the box.

Get those thinking gears turning,
and begin packing up your inventions!
