

After our Math Vitamin yesterday, Grant the Ant and Antsy Nancy took the seed they found back to their ant colony.

Antsy Nancy's mom, Fan C. Ant, pulled out her plant identification field guide and helped them locate the seed in question.

On page 346, they found a picture of what looked like the seed. "There seems to be quite a few kinds of plants that grow from seeds that look like the seed you found," explained Fan C. "Which one do you think it might be?"

Select a possible plant from below. Fill it with pattern blocks. What does it look like? When you're ready, have a teacher take a picture of your design.
