

Good morning!

The Bamboo Garden is soon to become a true garden! Our Facilities Manager, Nikki, ordered raised flower beds of different sizes for us to use for our garden. One is 6 feet long, 3 feet wide and 2 feet high and another is 8 feet long, 2 feet wide and 2 feet high. Use cubes to build a model of one or both of the flower beds. Each one-inch cube represents one cubic foot. Count the total number of blocks used to determine the volume of soil contained in each flower bed.
