

Good Morning!

When I see pretty patterns,
Flying throughout the skies
I know they are none other
than lovely butterflies!

We are so lucky to see these beautiful creatures in person today! There are 150,000 different species of butterflies or moths. The colors and patterns you see on their wings can camouflage them into their surroundings or be a warning to predators.

On your sheet is just a tiny sample of the many kinds of butterflies and moths in the world. Cut out the insects and sort them into groups according to the features you notice.
