

Yesterday, almost everyone categorized the Geoblocks by shape. There are cubes, rectangular prisms, triangular prisms and pyramids. Within those shape categories, people had many different ways of grouping similar blocks. Today, use the key provided to find one of each type of block to make a set for yourself. Once you have one of each type, label each block with its name. After you have a labeled set, see what kinds of relationships between the Geoblocks you can find. Record your findings!
