

Good morning!

This week, we have two field trips: **Peter Pan** at Seattle Children's Theater tomorrow and the **Calder exhibit** at Seattle Art Museum on Thursday. Begin your morning with Math Vitamin.

"Gather 'round, Lost Boys," Wendy called, "I have a really fun project for you!" Wendy was influenced by an artist she learned about during a visit to a museum. His name was **Alexander Calder**, and he created amazing MOBILES of shapes that move! Wendy challenged the boys to practice designing mobiles that can

**BALANCE.**

Now you can try!

First, create one side of your mobile using Cuisenaire rods. Then create a second side using a different combination of rods that will **BALANCE** or **EQUAL** the total of the first side.
