

Good Morning!

The other merchants in the Moodey Building are also busy getting their shops reorganized after the renovations last week. Just like yesterday, they will need to know the size of each item before they can put them back on the shelves. Let's take some **MEASUREMENTS** to see how much space they will need.

Today we'll help out the **Flower Shop**, **Fish Market** and **Fruit Stand**. Use the **Unit Cubes** to measure some goods from these merchants.

Which items were better measured with **UNIT CUBES**? Why?

Which items were better measured with **TENS RODS**? Why?

Before you begin, use your experience from yesterday to think about and plan how to organize your recording.
