

103F11.EPS

We've been building treehouse ladders for the past two days, thinking of the number of units it takes to build a ladder.

Now it's time to think about traveling on the ladders themselves. Choose a ladder you've designed this week. Imagine you need to travel up and down the ladder, probably to do some work on the treehouse.

Find the number of steps on your ladder. How many steps will you take if you go up and down a ladder once? What about two trips? Five? Record your discoveries!
